CONFERENCE REPORT

Micromechanisms of crack extension (Cambridge, England, March/April 1980) 185

TITLES

Titles of published papers are listed alphabetically, ignoring definite and indefinite articles.

Analysis of fatigue damage in composite laminates
K. L. Reifsnider and A. Talug 3

Analysis of thermal cycling by solid mensuration
H. Albaugh and R. Venuti 118

Application of finite element analysis techniques for predicting crack propagation in lugs
O. Gencoz, U. G. Gorenson and R. R. Merrill 121

Applications of a study of service-strength to the construction of special-purpose machines
W. Schweer and R. F. Fangmeier 177

Asymptotic stress intensity factors for fatigue crack-growth calculations
D. P. Rooke 69

Cyclic and monotonic crack propagation in a high toughness aluminium alloy
D. Rhodes, J. C. Radon and L. E. Culver 61

The effect of load stepdown on fatigue crack arrest and retardation
H. Sehitoglu and D. L. McDiarmid 55

Effect of prior treatment on the low cycle fatigue behaviour of aluminium alloy RR58 at 423K
Vakil Singh, M. S. N. Rao and P. Rama Rao 12

Effects of small defects on fatigue strength of metals
Y. Murakami and T. Endo 23

Fatigue crack growth in tubular welded connections
W. D. Dover and S. J. Holdbrook 37

Fatigue crack growth rates and fracture toughness in electro-slag refined En 52 steel
Hohan G. Hebsur, K. P. Abraham and Y. V. R. K. Prasad 147

Fatigue crack growth rates in a porous metal
P. S. DasGupta and R. A. Queeney 113

Fatigue crack growth retardation under constant amplitude and variable mean stress
G. Glinka and K. Molski 105

Fatigue of plain concrete in compression under varying sequences of two-level programme loading
E. W. Bennett 171

Fatigue reliability in welded joints of offshore structures
P. H. Wirsching 77

Fatigue research at Portsmouth Polytechnic
T. V. Duggan 51

The influence of joint dimensions on the fatigue strength of welded tubular joints
J. G. Wylde and A. McDonald 31

A method for correlating different types of fatigue curve
A. Esin 153

Overstrain effects during variable amplitude service history testing
A. Conle and T. H. Topper 130

The prediction of fatigue life under random loading: a diffusion model
K. P. Oh 99

Statistical aspects of the fatigue life of nickel-silver wire under two-level loading
S. Tanaka, M. Ichikawa and S. Akita 159

A statistical consideration of Miner's rule
T. Shimokawa and S. Tanaka 165

Use of thermodynamics in a mathematical analysis of thermal cycling
H. Albaugh, R. Venuti and C. Hoggatt 85

Reprints

Reprints of all articles in this journal are available in quantities of 100 or more.

Reprints are essential —

- for the company that wants to distribute impartial comment on its activities to potential customers and clients
- for the company that wants to up-date its technical staff on new techniques and new technologies

For full details of prices and availability of reprints, please write to

COMPENDIUM OF STRESS INTENSITY FACTORS

D P Rooke and D J Cartwright

This compilation of solutions provides a reference book for all concerned with the behaviour of cracks. Of interest to research engineers, designers and materials scientists needing stress intensity factors for the application of fracture mechanics principles to fatigue, stress corrosion cracking, mechanical testing and the analysis of structural failure.

Divided into five structural groups – Flat sheets; Stiffened sheets; Discs, tubes and bars; Three dimensions; Plates and shells – presented in a simple standard graphical form with emphasis throughout on ease of use: the graphs, which contain an inset sketch of the configuration, are preceded by descriptive text with relevant formulae and references.
